

All in one

STERI-SAFE_{wave}

Not just a bur block:

- holds 14x FG and 12x RA shank
- easy and safe transportation
- anti-slip colour coding system
- suitable for all relevant reconditioning methods
- no silicone holders required
- validated by an independent institute

„I appreciate the stability during treatment, the easy removal of the instruments with one hand and the sufficient space for the various sets of instruments.

During hygienic reprocessing, the open design of the bur block means that the working parts and shanks of the instruments are very easily accessible, both during ultrasonic pre-cleaning and during cleaning and disinfection in the washer-disinfector. The STERI-SAFEwave also does not need to be opened during these processes.

When sterilizing, the steam can reach all surfaces as no silicone holders are required.“

Dr. med. dent. Holger Gloerfeld
University of Marburg, Germany

Pusch®

There is no substitute for quality

universal

The innovative wave design of this modern, sterilizable bur bloc permits safe and combined handling of instruments **with RA and FG shank** in standard lengths before, while and after treating patients. From preparation to final polishing, all instruments with both types of shank are instantly at hand and clearly arranged together in this bur bloc.

max. 14 instruments with FG shank,
with an overall length from 19 mm to 24 mm

max. 12 instruments with RA shank,
with an overall length from 22 mm to 30 mm

safer

The **safety bracket** is locked in place when closed and securely prevents the combination of instruments with RA and FG shanks from falling out, naturally also during the reprocessing cycle. In addition, the working parts are protected during ultrasonic cleaning, as they do not come into contact with each other. Swing the safety bracket backwards in order to remove the required instruments.

systematically

The STERI-SAFEwave can also be **colour-coded**. Available are five colours, the coloured strips serve a two-fold purpose. In addition to permitting colour-coding, they also enhance the non-slip stability of the bur bloc.

Replacement silicone strips

Art.-Nr.: FC 01 red
Art.-Nr.: FC 02 yellow

Art.-Nr.: FC 03 green
Art.-Nr.: FC 04 blue
Art.-Nr.: FC 05 black

hygienic

In conjunction with the hygiene process, benefit from the advantages of the resin material of the STERI-SAFEwave allowing it to be disinfected and sterilized, as well as from the fact that its size allows it to be integrated into existing hygiene concepts (sterile packaging / containers).
The open design of the STERI-SAFEwave ensures a better perfusion for optimum and effective reprocessing.

validated

The **cleanability and sterilizability** of STERI-SAFEwave itself and in combination with pre-contaminated medical BUSCH products has been **validated** by an external institute.
